With the new Evidence Photographer Certification, you won't just raise the standard...you'll become it.

The Evidence Photographers International Council (EPIC) proudly announces the Evidence Photographer Certification, focused on the needs of photographers involved with crime scenes.

EPIC's Evidence Photographer Certification will set the industry guidelines and standards—needed in this ever-changing industry—and will provide this information through instruction. This new certification is not just a piece of paper, it will become a part of your reputation, increasing others' trust in your abilities.

This certification is unique for evidence photographers. Every test answer is fully referenced to at least one current, readily available textbook regarding forensic or general photography.

“The Evidence Photographer Certification will lay proof to the fact that you have completed a test designed by your peers on the subject matter expertise you are testifying to in court, thereby confirming your credibility and integrity.”

David Knoerlein, Forensic Digital Imaging (FDI) founder;
Evidence Photographer Certification Committee Member
